1. Abstract

This document defines test procedures based on the requirements for the User to Network Interface (UNI) Type 1 mode or manual configuration mode. The UNI Type 1 mode provides data-plane connectivity services without control-plane or management-plane capabilities.

2. Terminology

All to One Bundling	A UNI attribute in which all CE-VLAN IDs are associated with a single EVC
Bandwidth Profile	A characterization of ingress Service Frame arrival times and lengths at a reference point and a specification of the disposition of each Service Frame based on its level of compliance with the Bandwidth Profile. In this document the reference point is the UNI
Broadcast Service Frame	A Service Frame that has the broadcast destination MAC address
Bundling	A UNI attribute in which more than one CE-VLAN ID can be associated with an EVC
CBS	Committed Burst Size
CE	Customer Edge
CE-VLAN CoS	Customer Edge VLAN CoS
CE-VLAN ID	Customer Edge VLAN ID
CE-VLAN ID Preservation	An EVC attribute in which the CE-VLAN ID of an egress Service Frame is identical in value to the CE-VLAN ID of the corresponding ingress Service Frame
CE-VLAN ID/EVC Map	An association of CE-VLAN IDs with EVCs at a UNI
CE-VLAN Tag	Customer Edge VLAN Tag
CF	Coupling Flag
CIR	Committed Information Rate
Class of Service	A set of Service Frames that have a commitment from the Service Provider to receive a particular level of performance
Class of Service Identifier	Information derivable from a) the EVC to which the Service Frame is mapped or b) the combination of the EVC to which the Service Frame is mapped and a set of one or more CE-VLAN CoS values
CM	Color Mode
Color Mode	CM is a Bandwidth Profile parameter. The Color Mode parameter indicates whether the color-aware or color-blind property is employed by the Bandwidth Profile. It takes a value of "color-blind" or "color-aware" only
Color-aware	A Bandwidth Profile property where a pre-determined level of Bandwidth Profile compliance for each Service Frame is taken into account when determining the level of compliance for each Service Frame

Color-blind	A Bandwidth Profile property where a pre-determined level of Bandwidth Profile compliance for each Service Frame, if present, is ignored when determining the level of compliance for each Service Frame
Committed Burst Size	CBS is a Bandwidth Profile parameter. It limits the maximum number of bytes available for a burst of ingress Service Frames sent at the UNI speed to remain CIR-conformant
Committed Information Rate	CIR is a Bandwidth Profile parameter. It defines the average rate in bits/s of ingress Service Frames up to which the network delivers Service Frames and meets the performance objectives defined by the CoS Service Attribute
Coupling Flag	CF is a Bandwidth Profile parameter. The Coupling Flag allows the choice between two modes of operations of the rate enforcement algorithm. It takes a value of 0 or 1 only
Customer Edge	Equipment on the Subscriber side of the UNI
Customer Edge VLAN CoS	The user priority bits in the IEEE 802.1Q Tag in a Service Frame that is either tagged or priority tagged
Customer Edge VLAN ID	The identifier derivable from the content of a Service Frame that allows the Service Frame to be associated with an EVC at the UNI
Customer Edge VLAN Tag	The IEEE 802.1Q Tag in a tagged Service Frame
EBS	Excess Burst Size
Egress Service Frame	A Service Frame sent from the Service Provider network to the CE
EIR	Excess Information Rate
E-LAN Service	Ethernet LAN Service
E-Line Service	Ethernet Line Service
Ethernet LAN Service	An Ethernet Service Type distinguished by its use of a Multipoint-to-Multipoint EVC
Ethernet Line Service	An Ethernet Service Type distinguished by its use of a Point-to-Point EVC
Ethernet Virtual Connection	An association of two or more UNIs that limits the exchange of Service Frames to UNIs in the Ethernet Virtual Connection
EVC	Ethernet Virtual Connection
Excess Burst Size	EBS is a Bandwidth Profile parameter. It limits the maximum number of bytes available for a burst of ingress Service Frames sent at the UNI speed to remain EIR-conformant
Excess Information Rate	EIR is a Bandwidth Profile parameter. It defines the average rate in bits/s of ingress Service Frames up to which the network may deliver Service Frames without any performance objectives
FD	Frame Delay
FDV	Frame Delay Variation
FLR	Frame Loss Ratio
Frame	Short for Ethernet frame

Frame Delay	The time required to transmit a Service Frame from source to destination across the metro Ethernet network
Frame Delay Performance	A measure of the delays experienced by Service Frames belonging to the same CoS instance
Frame Delay Variation	The difference in delay of two Service Frames
Frame Delay Variation Performance	A measure of the variation in the delays experienced by Service Frames belonging to the same CoS instance
Frame Loss Ratio Performance	Frame Loss Ratio is a measure of the number of lost frames inside the MEN. Frame Loss Ratio is expressed as a percentage
Ingress Service Frame	A Service Frame sent from the CE into the Service Provider network
Layer 2 Control Protocol Service Frame	A Service Frame that is used for Layer 2 control, e.g., Spanning Tree Protocol
Layer 2 Control Protocol Tunneling	The process by which a Layer 2 Control Protocol Service Frame is passed through the Service Provider network without being processed and is delivered unchanged to the proper UNI(s)
Multicast Service Frame	A Service Frame that has a multicast destination MAC address
Multipoint-to-Multipoint EVC	An EVC with two or more UNIs. A Multipoint-to-Multipoint EVC with two UNIs is different from a Point-to-Point EVC because one or more additional UNIs can be added to it
Point-to-Point EVC	An EVC with exactly 2 UNIs
Service Frame	An Ethernet frame transmitted across the UNI toward the Service Provider or an Ethernet frame transmitted across the UNI toward the Subscriber
Service Level Agreement	The contract between the Subscriber and Service Provider specifying the agreed to service level commitments and related business agreements
Service Level Specification	The technical specification of the service level being offered by the Service Provider to the Subscriber
Service Multiplexing	A UNI service attribute in which the UNI can be in more than one EVC instance
Service Provider	The organization providing Ethernet Service(s)
SLA	Service Level Agreement
SLS	Service Level Specification
Subscriber	The organization purchasing and/or using Ethernet Services
UNI	User Network Interface
UNI-C	Compound architectural component on the Subscriber side of the UNI that represents all the functions required to connect a subscriber to a MEN
UNI-N	Compound architectural component on the Service Provider side of the UNI that represents all the functions required to connect a MEN to a MEN subscriber
Unicast Service Frame	A Service Frame that has a unicast destination MAC address

User Network Interface

The physical demarcation point between the responsibility of the Service Provider and the responsibility of the Subscriber

W_G

W_G is the amount of traffic accepted as Green over the time interval T that should be delivered to the egress UNI

W_Y

W_Y is the amount of traffic accepted as Yellow over the time interval T that may be delivered to the egress UNI

3. Scope

The **Abstract Test Suite for UNI Type 1** describes the test procedures based on the requirements for the User to Network Interface (UNI) Type 1 mode or manual configuration mode. Test Cases in this Test Specification are only defined for the UNI-N and each different physical interface **MUST** be tested independently.

The UNI Type 1 requirements are described in sections 5, 6.1 and 6.2 of MEF 13 *User Network Interface (UNI) Type 1 Implementation Agreement*.

Section 5 of MEF 13 defines the common characteristics of a UNI Type 1 such as the supported physical media and Ethernet frame formats.

Section 6.1 of MEF 13 defines the specific characteristics of a UNI Type 1.1 which is a subset of the UNI Type 1 and which is not meant to support service multiplexing.

Section 6.2 of MEF 13 defines the specific characteristics of a UNI Type 1.2 which is also a subset of the UNI Type 1 but which is meant to support service multiplexing.

UNI Type 2 mode (Service Management) and UNI Type 3 mode (Dynamic Connection Setup) are out of the scope of this document.

This document may be updated in the future to reflect new work done in the MEF Technical Committee.

4. Compliance Levels

The key words "**MUST**", "**MUST NOT**", "**REQUIRED**", "**SHALL**", "**SHALL NOT**", "**SHOULD**", "**SHOULD NOT**", "**RECOMMENDED**", "**MAY**", and "**OPTIONAL**" in this document are to be interpreted as described in RFC 2119. All key words **MUST** be use upper case, bold text.

5. Introduction

This document supplements the existing MEF test specifications MEF 9 *Abstract Test Suite for Ethernet Services at the UNI* and MEF 14 *Abstract Test Suite for Traffic Management Phase 1*, by adding test procedures based on the requirements for the User to Network Interface (UNI) Type 1 mode (manual configuration) defined in MEF 13 *User Network Interface (UNI) Type 1 implementation agreement*.

As with MEF 9 and MEF 14, vendors can refer to the requirements and test procedures defined in this specification in the development and commercial cycles of their products and carriers can use them to ensure that the network elements they deploy or add to their existing network will have the ability to deliver Ethernet Services based on the MEF technical specifications.

The requirements, framework and functional model on how the UNI reference point operates in a Metro Ethernet Network is defined on the Metro Ethernet Forum technical specification MEF 11 *User to Network Interface Requirements and Framework*.

6. Test Configuration

Although some Test Cases may require very specific test configurations, most Test Cases defined in this document are to be executed by attaching the Ethernet interface of a tester to the Ethernet User Network Interface (UNI).

Test Configuration for UNI Type 1

- In each Test Case, the Test Configuration section describes the number of EVCs associating the number of UNIs and the number of CE-VLAN IDs mapped to the EVCs
- Testers are attached to all UNIs in the configured EVCs
- CE-VLAN ID/EVC Maps are given for each Test Case
- Applicable Bandwidth Profile and Service Performance parameters are provided when necessary

7. Template for Abstract Test Cases for UNI Type 1

The following template is adopted for the definition of Abstract Test Cases for UNI Type 1:

ABSTRACT TEST SUITE FOR UNI TYPE 1																
Test Name	Name derived from reference document															
Test Definition ID	A punctuated alphanumeric string assigned to each defined requirement and test procedure couple using the following convention: 'one to three letter abbreviated source document name'. 'section number' - 'specific requirement number in the section from which requirement is derived'. This number always figures as the last number of an ID. UNI Type 1 = U1; Ethernet Services Definitions = S; etc. Example: U1.5.1-1															
Reference Document	Reference document (and section and paragraph when useful for clarity)															
Test Type	Functional, Conformance, Interoperability or Performance															
Test Status	Mandatory, Optional															
Requirement Description	Brief description of the service requirement that MUST or SHOULD be satisfied															
Test Object	Succinct description of test purpose															
Test Configuration	Succinct description of test bed configuration															
CE-VLAN ID/EVC Map	<p>A sample CE-VLAN ID/EVC Map is suggested. Variables augment it.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2">INGRESS UNI 'A'</th> <th colspan="2">EGRESS UNI 'B'</th> </tr> <tr> <th>CE-VLAN ID</th> <th>EVC</th> <th>CE-VLAN ID</th> <th>EVC</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">10</td> <td style="text-align: center;">EVC₁</td> <td style="text-align: center;">10</td> <td style="text-align: center;">EVC₁</td> </tr> </tbody> </table> <p>Use of other CE-VLAN IDs is permitted provided that configuration of the CE-VLAN IDs conforms to MEF 10 [Ethernet Services Attributes Phase 1], Section 7.5.1</p>	INGRESS UNI 'A'		EGRESS UNI 'B'		CE-VLAN ID	EVC	CE-VLAN ID	EVC	10	EVC ₁	10	EVC ₁			
INGRESS UNI 'A'		EGRESS UNI 'B'														
CE-VLAN ID	EVC	CE-VLAN ID	EVC													
10	EVC ₁	10	EVC ₁													
Bandwidth Profile	<p>A sample Bandwidth Profile table is suggested. Variables augment it.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="5">Per Ingress UNI</th> </tr> <tr> <th>UNI</th> <th colspan="4">Bandwidth Profile Parameters</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">UNI_A</td> <td style="text-align: center;">CIR_A</td> <td style="text-align: center;">CBS_A</td> <td style="text-align: center;">EIR_A</td> <td style="text-align: center;">EBS_A</td> </tr> </tbody> </table> <p>Note 1 : (0 < CIR_A ≤ UNI Speed), (CBS_A ≥ maximum Service Frame size)</p>	Per Ingress UNI					UNI	Bandwidth Profile Parameters				UNI _A	CIR _A	CBS _A	EIR _A	EBS _A
Per Ingress UNI																
UNI	Bandwidth Profile Parameters															
UNI _A	CIR _A	CBS _A	EIR _A	EBS _A												
Service Performance	<p>A sample EVC Performance Objectives table is suggested. Variables augment it.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>CoS Identifier</th> <th>EVC Performance Service Attributes</th> <th>Performance Objectives</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1</td> <td> Frame Delay (FD) Performance Frame Delay Variation (FDV) Performance Frame Loss Ratio (FLR) Performance </td> <td style="text-align: center;"> FD₁ FDV₁ FLR₁ </td> </tr> </tbody> </table>	CoS Identifier	EVC Performance Service Attributes	Performance Objectives	1	Frame Delay (FD) Performance Frame Delay Variation (FDV) Performance Frame Loss Ratio (FLR) Performance	FD ₁ FDV ₁ FLR ₁									
CoS Identifier	EVC Performance Service Attributes	Performance Objectives														
1	Frame Delay (FD) Performance Frame Delay Variation (FDV) Performance Frame Loss Ratio (FLR) Performance	FD ₁ FDV ₁ FLR ₁														
Test Procedure	Succinct description of the test procedure															
Units	Units can be time units, rates and counts in integers such as milliseconds, frames per second and numbers of valid frames. For the most part units used are defined in RFCs 2285, 2544, 2889															
Variables	Variables such as number of UNIs, EVCs and CE-VLAN IDs and frame formats and lengths MUST be described															
Results	Description of the textual, numerical and/or graphical format in which to display test results. Results can be Pass or Fail															
Remarks	Description of any particular observations that might effect the test result															

8. Abstract Test Cases for UNI Type 1 Common Characteristics

In this section we assume familiarity with MEF 13 *User Network Interface (UNI) Type 1 Implementation Agreement* and, in particular, its section 5 which defines the common characteristics of the UNI Type 1.

Three Abstract Test Cases based on the common characteristics of the UNI Type 1 are defined in this section.

Abstract Test Cases for UNI-N Type 1 Common Characteristics

Test Case 1: Type 1 UNI-N Ethernet Physical Medium

Test Case 2: Type 1 UNI-N Ethernet Frame Format - Tagged, Untagged and Priority Tagged

Test Case 3: Type 1 UNI-N Minimum and Maximum Ethernet Frame Size

TEST CASE 1: Type 1 UNI-N Ethernet Physical Medium

ABSTRACT TEST SUITE FOR UNI TYPE 1																					
Test Name	Type 1 UNI-N Ethernet Physical Medium																				
Test Definition ID	U1.5.1-2																				
Reference Document	MEF 13 [User Network Interface (UNI) Type 1 Implementation Agreement]																				
Test Type	Conformance																				
Test Status	Mandatory																				
Requirement Description	<p>A Type 1 UNI-N MUST support at least one of the following IEEE 802.3 Ethernet PHYs:</p> <ul style="list-style-type: none"> · 10BASE-T in Full-duplex mode · 100BASE-T including 100BASE-TX and 100BASE-FX in Full-duplex mode · 1000BASE-X including 1000BASE-SX, 1000BASE-LX, and 1000BASE-T in Full-duplex mode · 10GBASE-SR, 10GBASE-LX4, 10GBASE-LR, 10GBASE-ER, 10GBASE-SW, 10GBASE-LW, and 10GBASE-EW in Full-duplex mode 																				
Test Object	Verify that a Type 1 UNI-N supports at least one of the IEEE 802.3 Ethernet PHYs listed in the requirement description section above																				
Test Configuration	One EVC associating two Type 1 UNIs is configured and at least one CE-VLAN ID is mapped to the EVC. A per Ingress UNI bandwidth profile is applied at both UNIs. Testers with proper PHY that matches each UNI are attached to both UNIs in the configured EVC																				
CE-VLAN ID/EVC Map	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="2" style="text-align: center;">UNI 'A'</th> <th colspan="2" style="text-align: center;">UNI 'B'</th> </tr> <tr> <th style="text-align: center;">CE-VLAN ID</th> <th style="text-align: center;">EVC</th> <th style="text-align: center;">CE-VLAN ID</th> <th style="text-align: center;">EVC</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">11*</td> <td style="text-align: center;">EVC₁</td> <td style="text-align: center;">11*</td> <td style="text-align: center;">EVC₁</td> </tr> </tbody> </table> <p>Use of other CE-VLAN IDs is permitted provided that configuration of the CE-VLAN IDs conforms to MEF 10 [Ethernet Services Attributes Phase 1], Section 7.5.1</p> <p>The CE-VLAN ID for untagged and priority tagged Service Frames is configured to 11 at both UNIs</p>	UNI 'A'		UNI 'B'		CE-VLAN ID	EVC	CE-VLAN ID	EVC	11*	EVC ₁	11*	EVC ₁

9. Abstract Test Cases for UNI Type 1.1 Specific Characteristics

In this section we assume familiarity with MEF 13 *User Network Interface (UNI) Type 1 Implementation Agreement* and, in particular, its section 6.1 which defines the specific characteristics of the UNI Type 1.1.

Fourteen Abstract Test Cases based on the specific characteristics of the UNI Type 1.1 are defined in this section.

Abstract Test Cases for UNI-N Type 1.1 Specific Characteristics

Test Case 4: Type 1.1 UNI-N CE-VLAN ID - Single EVC

Test Case 5: Type 1.1 UNI-N Configurable CE-VLAN ID/EVC Map - No CE-VLAN ID

Test Case 6: Type 1.1 UNI-N Bandwidth Profile per Ingress UNI

Test Case 7: Type 1.1 UNI-N Bandwidth Profile Rate Enforcement when CIR > 0 and EIR = 0

Test Case 8: Type 1.1 UNI-N Mandatory CIR Configuration Granularity

Test Case 9: Type 1.1 UNI-N Optional CIR Configuration Granularity

Test Case 10: Type 1.1 UNI-N CBS Configuration

Test Case 11: Type 1.1 UNI-N Mandatory Layer 2 Control Protocol Processing

Test Case 12: Type 1.1 UNI-N Optional Layer 2 Control Protocol Processing

Test Case 13: Type 1.1 UNI-N Optional Layer 2 Control Protocol Discard

Test Case 14: Type 1.1 UNI-N Point-to-Point EVC

Test Case 15: Type 1.1 UNI-N CE-VLAN ID Preservation

Test Case 16: Type 1.1 UNI-N CE-VLAN CoS Preservation

Test Case 17: Type 1.1 UNI-N Service Frame Unconditional Delivery

TEST CASE 4: Type 1.1 UNI-N CE-VLAN ID - Single EVC

ABSTRACT TEST SUITE FOR UNI TYPE 1																					
Test Name	Type 1.1 UNI-N CE-VLAN ID - Single EVC																				
Test Definition ID	U1.6.1.1-7, 8																				
Reference Document	MEF 13 [User Network Interface (UNI) Type 1 Implementation Agreement]																				
Test Type	Conformance																				
Test Status	Mandatory																				
Requirement Description	A Type 1.1 UNI-N MUST be able to support a single EVC and to accept any CE-VLAN ID received from the UNI-C																				
Test Object	Verify that a Type 1.1 UNI-N can support a single EVC and accept any CE-VLAN ID received from the UNI-C																				
Test Configuration	One EVC associating at least two Type 1.1 UNIs is configured and all possible CE-VLAN IDs are mapped to the EVC. A per Ingress UNI bandwidth profile is applied at both UNIs. Testers with proper PHY that matches each UNI are attached to all UNIs in the configured EVC																				
CE-VLAN ID/EVC Map	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="2" style="text-align: center;">UNI 'A'</th> <th colspan="2" style="text-align: center;">UNI 'B'</th> </tr> <tr> <th style="text-align: center;">CE-VLAN ID</th> <th style="text-align: center;">EVC</th> <th style="text-align: center;">CE-VLAN ID</th> <th style="text-align: center;">EVC</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">All possible values allowed at the UNI-C</td> <td style="text-align: center;">EVC₁</td> <td style="text-align: center;">All possible values allowed at the UNI-C</td> <td style="text-align: center;">EVC₁</td> </tr> </tbody> </table>	UNI 'A'		UNI 'B'		CE-VLAN ID	EVC	CE-VLAN ID	EVC	All possible values allowed at the UNI-C	EVC ₁	All possible values allowed at the UNI-C	EVC ₁

Bandwidth Profile	<table border="1" style="width: 100%; text-align: center;"> <thead> <tr> <th colspan="5">PER INGRESS UNI</th> </tr> <tr> <th>UNI</th> <th colspan="4">Bandwidth Profile Parameters</th> </tr> </thead> <tbody> <tr> <td>UNI_A</td> <td>CIR_A</td> <td>CBS_A</td> <td>EIR_A</td> <td>EBS_A</td> </tr> </tbody> </table> <p>Note 1: ($0 < \text{CIR}_A < \text{Ingress UNI Speed}$), ($\text{CBS}_A \geq 12176 \text{ bytes}$) Note 2: ($\text{Ingress CIR}_A \leq \text{Egress UNI Speed}$) Note 3: ($\text{EIR}_A = 0$) and ($\text{EBS}_A = 0$)</p>	PER INGRESS UNI					UNI	Bandwidth Profile Parameters				UNI _A	CIR _A	CBS _A	EIR _A	EBS _A
PER INGRESS UNI																
UNI	Bandwidth Profile Parameters															
UNI _A	CIR _A	CBS _A	EIR _A	EBS _A												
Service Performance	Not Specified															
Test Procedure	<p>Tester offers Service Frames of length λ at an average rate equal to CIR_A to the ingress UNI during a time interval T. At time $T/2$ tester injects a burst of ingress Service Frames greater than CBS_A. Tester measures the number of Service Frames delivered at the associated egress UNIs. The amount of traffic delivered at each egress UNI must fall within the range $X \leq W_G \leq Z$ where:</p> <ul style="list-style-type: none"> W_G is the amount of traffic accepted as Green over the time interval T that should be delivered to the egress UNI $X_A = (\text{CIR}_A * T + \text{CBS}_A - F)$ and $Z_A = (\text{CIR}_A * T + \text{CBS}_A + F)$ 															
Units	Number of valid Service Frames															
Variables	Bandwidth Profile Parameters CIR_A , CBS_A , UNIs interface speed, time interval T , tolerated variance F , number and length λ of the offered Service Frames															
Results	Pass, fail															
Remarks																

TEST CASE 11: Type 1.1 UNI-N Mandatory Layer 2 Control Protocol Processing

ABSTRACT TEST SUITE FOR UNI TYPE 1													
Test Name	Type 1.1 UNI-N Mandatory Layer 2 Control Protocol Processing												
Test Definition ID	U1.6.1.4-16												
Reference Document	MEF 13 [User Network Interface (UNI) Type 1 Implementation Agreement]												
Test Type	Conformance												
Test Status	Mandatory												
Requirement Description	<p>A Type 1.1 UNI-N MUST be able to pass the following L2 Control Protocols to the EVC:</p> <ul style="list-style-type: none"> · Spanning Tree Protocol (STP), · Rapid Spanning Tree Protocol (RSTP), · Multiple Spanning Tree Protocol (MSTP) · All LANs Bridge Management Group Block of Protocol · Generic Attribute Registration Protocol (GARP) 												
Test Object	Verify that a Type 1.1 UNI-N can pass each L2 Control Protocol described in the requirement description section above to the EVC												
Test Configuration	One EVC associating two Type 1.1 UNIs is configured and all possible CE-VLAN IDs are mapped to the EVC. A per Ingress UNI bandwidth profile is applied at the UNI. Testers with proper PHY that matches each UNI are attached to both UNIs in the configured EVC												
CE-VLAN ID/EVC Map	<table border="1" style="width: 100%; text-align: center;"> <thead> <tr> <th colspan="2">INGRESS UNI 'A'</th> <th colspan="2">EGRESS UNI 'B'</th> </tr> <tr> <th>CE-VLAN ID</th> <th>EVC</th> <th>CE-VLAN ID</th> <th>EVC</th> </tr> </thead> <tbody> <tr> <td>All possible values</td> <td>EVC₁</td> <td>All possible values</td> <td>EVC₁</td> </tr> </tbody> </table>	INGRESS UNI 'A'		EGRESS UNI 'B'		CE-VLAN ID	EVC	CE-VLAN ID	EVC	All possible values	EVC ₁	All possible values	EVC ₁

10. Abstract Test Cases for UNI Type 1.2 Specific Characteristics

In this section we assume familiarity with MEF 13 *User Network Interface (UNI) Type 1 Implementation Agreement* and, in particular, its section 6.2 which defines the specific characteristics of the UNI Type 1.2.

Twenty-seven Abstract Test Cases based on the specific characteristics of the UNI Type 1.2 are defined in this section.

Abstract Test Cases for UNI-N Type 1.2 Specific Characteristics

- Test Case 18: Type 1.2 UNI-N Service Multiplexing
- Test Case 19: Type 1.2 UNI-N Service Multiplexing - Minimum Number of EVCs
- Test Case 20: Type 1.2 UNI-N Minimum Number of CE-VLAN IDs
- Test Case 21: Type 1.2 UNI-N CE-VLAN ID Range
- Test Case 22: Type 1.2 UNI-N Configurable CE-VLAN ID/EVC Map
- Test Case 23: Type 1.2 UNI-N CE-VLAN ID/EVC Map Service Frame Discard
- Test Case 24: Type 1.2 UNI-N All-to-One Bundling
- Test Case 25: Type 1.2 UNI-N Bandwidth Profile per Ingress UNI
- Test Case 26: Type 1.2 UNI-N Bandwidth Profile per EVC
- Test Case 27: Type 1.2 UNI-N Bandwidth Profile per Class of Service
- Test Case 28: Type 1.2 UNI-N Multiple Bandwidth Profiles
- Test Case 29: Type 1.2 UNI-N Bandwidth Profile Rate Enforcement when CIR > 0 and EIR = 0
- Test Case 30: Type 1.2 UNI-N Bandwidth Profile Rate Enforcement when CIR = 0 and EIR > 0
- Test Case 31: Type 1.2 UNI-N Bandwidth Profile Rate Enforcement when CIR > 0 and EIR > 0
- Test Case 32: Type 1.2 UNI-N Mandatory CIR Configuration Granularity
- Test Case 33: Type 1.2 UNI-N Mandatory EIR Configuration Granularity
- Test Case 34: Type 1.2 UNI-N Optional CIR Configuration Granularity
- Test Case 35: Type 1.2 UNI-N Optional EIR Configuration Granularity
- Test Case 36: Type 1.2 UNI-N CBS Configuration
- Test Case 37: Type 1.2 UNI-N EBS Configuration

TEST CASE 18: Type 1.2 UNI-N Service Multiplexing

ABSTRACT TEST SUITE FOR UNI TYPE 1																									
Test Name	Type 1.2 UNI-N Service Multiplexing																								
Test Definition ID	U1.6.2.1-23																								
Reference Document	MEF 13 [User Network Interface (UNI) Type 1 Implementation Agreement]																								
Test Type	Conformance																								
Test Status	Mandatory																								
Requirement Description	A Type 1.2 UNI-N MUST be able to support Service Multiplexing as defined in MEF 10																								
Test Object	Verify that a Type 1.2 UNI-N can support Service Multiplexing as defined in MEF 10																								
Test Configuration	At least two EVCs, each one associating a given Type 1.2 ingress UNI and at least one other Type 1.2 UNI are configured and at least one CE-VLAN ID is mapped per EVC. Per EVC bandwidth profiles are applied at all UNIs. Testers with proper PHY that matches each UNI are attached to all UNIs in the configured EVCs																								
CE-VLAN ID/EVC Map	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th colspan="2" style="background-color: #f4a460;">UNI 'A'</th> <th colspan="2" style="background-color: #f4a460;">UNI 'B'</th> <th colspan="2" style="background-color: #f4a460;">UNI 'C'</th> </tr> <tr> <th style="background-color: #f4a460;">CE-VLAN ID</th> <th style="background-color: #f4a460;">EVC</th> <th style="background-color: #f4a460;">CE-VLAN ID</th> <th style="background-color: #f4a460;">EVC</th> <th style="background-color: #f4a460;">CE-VLAN ID</th> <th style="background-color: #f4a460;">EVC</th> </tr> </thead> <tbody> <tr> <td style="background-color: #ffffcc;">11*</td> <td style="background-color: #ffffcc;">EVC₁</td> <td style="background-color: #ffffcc;"></td> <td style="background-color: #ffffcc;"></td> <td style="background-color: #ffffcc;">11*</td> <td style="background-color: #ffffcc;">EVC₁</td> </tr> <tr> <td style="background-color: #ffffcc;">12</td> <td style="background-color: #ffffcc;">EVC₂</td> <td style="background-color: #ffffcc;">12</td> <td style="background-color: #ffffcc;">EVC₂</td> <td style="background-color: #ffffcc;"></td> <td style="background-color: #ffffcc;"></td> </tr> </tbody> </table> <p>Use of other CE-VLAN IDs is permitted provided that configuration of the CE-VLAN IDs conforms to MEF 10 [Ethernet Services Attributes Phase 1], Section 7.5.1</p> <p>The CE-VLAN ID for untagged and priority tagged Service Frames is configured to 11 at both ingress and egress UNIs</p>	UNI 'A'		UNI 'B'		UNI 'C'		CE-VLAN ID	EVC	CE-VLAN ID	EVC	CE-VLAN ID	EVC	11*	EVC ₁			11*	EVC ₁	12	EVC ₂	12	EVC ₂

TEST CASE 35: Type 1.2 UNI-N Optional EIR Configuration Granularity

ABSTRACT TEST SUITE FOR UNI TYPE 1																
Test Name	Type 1.2 UNI-N Optional EIR Configuration Granularity															
Test Definition ID	U1.6.2.5-35.2															
Reference Document	MEF 13 [User Network Interface (UNI) Type 1 Implementation Agreement]															
Test Type	Conformance															
Test Status	Optional															
Requirement Description	A Type 1.2 UNI-N SHOULD allow configuration to modify EIR in the following granularities <ul style="list-style-type: none"> · 64 Kbps (DS0 rate) steps up to 1.422 Mbps (VC11 rate) or 1.932 Mbps (VC12 rate) [EIR range 1] · 1.422 Mbps (VC11 rate) or 1.932 Mbps (VC12 rate) steps up to 50 Mbps [EIR range 2] · 43.008 Mbps (VC3 rate) steps beyond 50 Mbps and up to 150 Mbps [EIR range 3] · 133.12 Mbps (VC4 rate) steps beyond 150 Mbps [EIR range 4] 															
Test Object	Verify that a Type 1.2 UNI-N allows configuration to modify EIR in the granularities described in the requirement description section above															
Test Configuration	One EVC associating two Type 1.2 UNIs is configured. At least one CE-VLAN ID is mapped to the EVC and one Bandwidth Profile is applied at the ingress UNI. Testers with proper PHY that matches each UNI are attached to both UNIs in the configured EVC

TEST CASE 41: Type 1.2 UNI-N CE-VLAN ID Preservation

ABSTRACT TEST SUITE FOR UNI TYPE 1																					
Test Name	Type 1.2 UNI-N CE-VLAN ID Preservation																				
Test Definition ID	U1.6.2.8-41																				
Reference Document	MEF 13 [User Network Interface (UNI) Type 1 Implementation Agreement]																				
Test Type	Conformance																				
Test Status	Mandatory																				
Requirement Description	A Type 1.2 UNI-N MUST be able to support CE-VLAN ID preservation																				
Test Object	Verify that a Type 1.2 UNI-N can support CE-VLAN ID preservation																				
Test Configuration	One EVC associating two Type 1.2 UNIs is configured and at least one CE-VLAN ID is mapped to the EVC. A per Ingress UNI bandwidth profile is applied at both UNIs. Testers with proper PHY that matches each UNI are attached to both UNIs in the configured EVC																				
CE-VLAN ID/EVC Map	<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2" style="text-align: center;">UNI 'A'</th> <th colspan="2" style="text-align: center;">UNI 'B'</th> </tr> <tr> <th style="text-align: center;">CE-VLAN ID</th> <th style="text-align: center;">EVC</th> <th style="text-align: center;">CE-VLAN ID</th> <th style="text-align: center;">EVC</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">11*</td> <td style="text-align: center;">EVC₁</td> <td style="text-align: center;">11*</td> <td style="text-align: center;">EVC₁</td> </tr> </tbody> </table> <p>Use of other CE-VLAN IDs is permitted provided that configuration of the CE-VLAN IDs conforms to MEF 10 [Ethernet Services Attributes Phase 1], Section 7.5.1</p> <p>The CE-VLAN ID for untagged and priority tagged Service Frames is configured to 11 at both ingress and egress UNIs</p>	UNI 'A'		UNI 'B'		CE-VLAN ID	EVC	CE-VLAN ID	EVC	11*	EVC ₁	11*	EVC ₁
