1 List of Contributing Members

The following members of the MEF participated in the development of this document and have requested to be included in this list.

- **CenturyLink**
- **Cisco**
- **NEC/Netcracker**
- **Tata Communications**
- **Nokia**

2 Abstract

The MEF Services Model (MSM) is an information and data model representation of multiple object model efforts for the following services: Carrier Ethernet, IP, Layer 1 and SD-WAN. The object definitions, object attributes and relationships specified in the MSM are based on MEF standards that define the given services. This document defines UML classes, data types and enumerations for representing Layer 1 Services, as defined in MEF 63[5] for Subscriber Layer 1 Service and MEF 64[6] for Operator Layer 1 Service, as part of MSM.

This document normatively includes the content of the following Papyrus[9] UML files as if they were contained within this document (pull request #168, GitHub Repository[7]):

- L1_CS.di
- L1_CS.notation
- L1_CS.uml
### Terminology and Abbreviations

This section defines the terms used in this document. In many cases, the normative definitions to terms are found in other documents. In these cases, the third column is used to provide the reference that is controlling, in other MEF or external documents.

**Table 1 - Terminology and Abbreviations**
4 Introduction

The MEF Services Model (MSM) Layer 1 Connectivity Service is a service model intended to support management of Layer 1 Services. The model is based on MEF 63[5] for Subscriber Layer 1 Service and MEF 64 for Operator Layer 1 Service. The MSM includes common classes and type definitions from MEF-Common and MEF-Types models that can be used by other MEF models. Figure 1 illustrates the model relationships.

The MSM is intended to be used at multiple LSO interface reference points for multiple API development efforts. Relevant interface reference points include: Sonata, Cantata, Allegro, Interlude and Legato. Each of these interfaces can use the common objects, attributes and relationships defined in the MSM.

The MSM can be used with TM Forum APIs where the JSON payload is derived from the MSM, by YANG-based APIs (via NETCONF or RESTCONF) where the YANG model is derived from the MSM or by OpenAPI based APIs where the OpenAPI specification is derived from the MSM.

Figure 1 – MEF Services Model–Layer 1 and other model associations
5 Service Information Model Overview

The service information model consists of a set of object classes, data types, enumerations their attributes and the relationships among them. The object classes defined in this document are modeled based on the services defined in the service related MEF standards, for supporting Subscriber Layer 1 Service and Operator Layer 1 Service. In the following, Figure 2 and Figure 3 illustrate the overviews of object classes, data types, enumerations and their relationships for Subscriber Layer 1 Service and Operator Layer 1 Service respectively. To simplify the overview, some of the minor supporting classes, data type and enumerations are not shown in the figures.

![Figure 2 – Subscriber Layer 1 Service Overview](image)

![Figure 3 – Operator Layer 1 Service Overview](image)
6 MEF-Types

This section details the data types imported from MEF-Types that are used by the Layer 1 Service models.

6.1 AdminState

Data type enumeration for Administrative states. Values are LOCKED and UNLOCKED.

6.2 OperationalState

Data type enumeration for Operational states. Values are DISABLED and ENABLED.

6.3 Identifier45

Data type attribute unique by network administrative domain, containing no more than 45 characters and non-null RFC Display String but not contain the characters 0x00 through 0x1F.

6.4 Integer

Integer is a primitive type representing integer values.

6.5 PositiveInteger

An integer greater than 0.

6.6 NaturalNumber

This is a whole, non-negative number.

6.7 TimeAndDate

This data type is for Time and Date in UTC. The datatype specifies year, month, day, hour, minute and second to represent the time and date.

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Type</th>
<th>Mult.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>year</td>
<td>PositiveInteger</td>
<td>1</td>
<td>A positive Integer value represents the year</td>
</tr>
<tr>
<td>month</td>
<td>PositiveInteger</td>
<td>1</td>
<td>A positive Integer value represents the month</td>
</tr>
<tr>
<td>day</td>
<td>PositiveInteger</td>
<td>1</td>
<td>A positive Integer value represents the day</td>
</tr>
<tr>
<td>hour</td>
<td>NaturalNumber</td>
<td>1</td>
<td>A natural number value represents the hour</td>
</tr>
<tr>
<td>minute</td>
<td>NaturalNumber</td>
<td>1</td>
<td>A natural number value represents the minute</td>
</tr>
<tr>
<td>second</td>
<td>NaturalNumber</td>
<td>1</td>
<td>A natural number value represents the second</td>
</tr>
</tbody>
</table>

Table 2 – Time and Date Data Type Attributes
6.8 **TimeInterval**

Time interval \( T \) for PM. E.g., 1 month, 20 days, 2 weeks, etc. The datatype specifies a time period and unit.

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Type</th>
<th>Mult.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>PositiveInteger</td>

<td>TimeIntervalUnit</td>
<td>1</td>
<td>A positive Integer value represents the time interval.</td>
</tr>
</tbody>
</table>

Table 3 – Time Interval\( T \) Data Type Definition

6.9 **TimeIntervalUnit**

Time interval unit, e.g., month, day, week, hour, etc..

Contains Enumeration Literals:

- YEAR
- MONTH
- WEEK
- DAY
- HOUR
- MINUTE
- SECOND

7 **Layer 1 Service Superclasses**

This section defines the set of superclasses that are used by the L1 Service information models. The superclass objects are L1ExternalInterface, L1EndPoint, L1Vc, L1Uni. These are superclass for L1SubscriberUni, L1Enni, SubscriberL1VcEndPoint and SubscriberL1Vc. The superclasses and the relationship with L1 service classes are shown in Figure 4.
7.1 L1ExternalInterface

The L1ExternalInterface represents the physical interface used for L1 services. This is an abstract class and the superclass. It contains the common attributes of three classes: L1SubscriberUni, L1OperatorUni and L1Enni defined in MEF 63[5] and MEF 64[6].

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Type</th>
<th>Mult.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>administrativeState</td>
<td>AdminState</td>
<td>1</td>
<td>This attribute denotes the administrative state of L1ExternalInterface. The values supported are LOCKED and UNLOCKED. When set to UNLOCK, the L1ExternalInterface is enabled and ready to forward traffic. When set to LOCKED, the L1ExternalInterface is disabled and will block (i.e., not forward) traffic.</td>
</tr>
<tr>
<td>operationalState</td>
<td>OperationalState</td>
<td>1</td>
<td>This attribute denotes the operational state of the L1ExternalInterface, as working ENABLED or not working DISABLED.</td>
</tr>
</tbody>
</table>

Table 4 – L1ExternalInterface Attributes

7.2 L1Uni

The L1Uni represents the physical interface used for L1 services with common attributes. This is an abstract class and the supper class. It contains the common attributes of L1SubscriberUni and L1OperatorUni not included in L1ExternalInterface superclass as defined in MEF 63[5] and MEF 64[6].
### Table 5 – L1Uni Attributes

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Type</th>
<th>Mult.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>The Physical Layer Service Attribute specifies the Client Protocol, the Coding Function and the optical interface Function. Reference MEF 63 Section 8.1.2 Physical Layer Service Attribute and MEF 64 Section 8.3.2 Operator UNI Physical Layer Service Attribute.</td>
</tr>
</tbody>
</table>

#### 7.3 L1EndPoint

The L1EndPoint represents the Subscriber L1 End Point or the Operator L1 End Point. This is an abstract class and the superclass of SubscriberL1EndPoint and OperatorL1EndPoint. It contains the common attributes of SubscriberL1EndPoint and OperatorL1EndPoint defined in MEF 63[5] and MEF 64[6].

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Type</th>
<th>Mult.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>administrativeState</td>
<td>AdminState</td>
<td>1</td>
<td>This attribute denotes the administrative state of L1EndPoint. The values supported are LOCKED and UNLOCKED. When set to UNLOCK, the L1EndPoint is enabled and ready to forward traffic. When set to LOCKED, the L1EndPoint is disabled and will block (i.e., not forward) traffic.</td>
</tr>
<tr>
<td>operationalState</td>
<td>OperationalState</td>
<td>1</td>
<td>This attribute denotes the operational state of the L1EndPoint, as working ENABLED or not working DISABLED.</td>
</tr>
</tbody>
</table>

#### 7.4 L1Vc

The L1Vc represents the SubscriberL1Vc or Operator L1Vc. This is an abstract class and the superclass of SubscriberL1Vc and OperatorL1Vc. It contains the common attributes of SubscriberL1Vc and OperatorL1Vc classes defined in MEF 63[5] and MEF 64[6].

<table>
<thead>
<tr>
<th>Attribute Name</th>
<th>Type</th>
<th>Mult.</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>administrativeState</td>
<td>AdminState</td>
<td>1</td>
<td>This attribute denotes the administrative state of L1Vc. The values supported are LOCKED and UNLOCKED. When set to UNLOCK, the L1Vc is enabled and ready to forward traffic. When set to LOCKED, the L1Vc is disabled and will block (i.e., not forward) traffic.</td>
</tr>
</tbody>
</table>
to LOCKED, the L1Vc is disabled and will block (i.e., not forward) traffic.

![Figure 10 – L1VC End Point Map Types](image)

Table 22 – L1VC End Point Map Data Type Attributes

10.5 L1ServiceLevelSpecification

The Subscriber L1VC Service Level Specification (SLS) Service Attribute is the technical specification of aspects of the service performance agreed to by the Service Provider and the Subscriber. For any given SLS, a given Performance Metric may or may not be specified.

The value of the Subscriber L1VC SLS Service Attribute is either None or a 3-tuple of the form (t-s, T, PM) where:

1) t-s is a time that represents the date and time for the start of the SLS.

2) T is a duration that is used in conjunction with t-s to specify a contiguous sequence of time intervals for determining when performance objectives are met. The units for T are not constrained.
For example, a calendar month is an allowable value. Since the duration of a month varies it could be specified as, e.g. from midnight on the 10th of one month up to but not including midnight on the 10th of the following month.

3) PM is a list where each element in the list consists of a Performance Metric Name, a list of parameter values specific to the definition of the Performance Metric, and Performance Metric Objective.

<table>
<thead>
<tr>

### Table 24 – SLS One-Way Delay Performance Metrics Data Type Attributes

#### 10.5.1 Sls1DelayPerformanceMetric

MEF 63[5]: The One-way Delay for the L1CI that ingresses at UNI 1 and that egresses at UNI 2 is defined as the time elapsed from the reception of the first bit of the ingress L1CI at UNI 1 until the reception of that first bit of the corresponding L1CI egressing at UNI 2. [R27] The SLS MUST define the One-way Delay Performance Metric Objective as met during Available Time (AT) over T-l for a PM entry if and only if measured delay $D \leq delayObjective$.

MEF 64[6]: The One-way Delay for the L1CI that ingresses at External Interface 1 and that egresses at External Interface 2 is defined as the time elapsed from the reception of the first bit of the ingress L1CI at External Interface 1 until the reception of that first bit of the corresponding L1CI egressing at External Interface 2. [R33] The SLS MUST define the One-way Delay Performance Metric Objective as met during Available Time over T-l for a PM entry if and only if measured delay $D \leq delayObjective$.

#### 10.5.2 Sls1ErroredSecondPerformanceMetric

An errored second (ES) is defined as one second sigma-k in Available Time with at least one errored block (EB) and is not a SES. An EB is defined as a block in which one or more bits are in error. In this specification the L1CI corresponds to a block.
MEF 63[5] & MEF 64[6]: The SLS MUST define the One-way Errored Second Performance Metric Objective as met during Available Time over T-1 for a PM entry if and only if measured Errored Second PM \( \leq \) erroredSecondObjective.

<table>

</tr>
</tbody>
</table>

Table 25 – SLS One-Way Errored Second Performance Metric Data Type Attributes

10.5.3 Sls1wSeverelyErroredSecondPerformanceMetric

A Severely Errored Second (SES) is defined as: - One second sigma-k which contains \( \geq 15\% \) errored L1CI, or - One second sigma-k which contains a defect (e.g., loss of signal), where a defect on ingress to (client protocol specific), or within the Service Provider's network (transport technology specific) may result in the insertion of a replacement signal (transport technology specific). Note that if a replacement signal is not inserted, a defect (such as a loss of signal) may propagate to the egress UNI. Note that a SES is not counted as a ES.

MEF 63[5] & MEF 64[6]: The SLS MUST define the One-way Severely Errored Second Performance Metric Objective as met during Available Time over T-1 for a PM entry if and only if measured Severely Errored Second PM \( \leq \) severelyErroredSecondObjective.

<table>

Table 26 – SLS One-Way Severely Errored Seconds Performance Metric Data Type Attributes

10.5.4 Sls1wAvailabilityPerformanceMetric

Availability is defined as the percentage of Available Time over a given interval T-1 which does not include Maintenance Interval Time (MIT).

MEF 63[5] & MEF 64[6]: The SLS MUST define the One-way Availability Performance Metric Objective as met over T-1 for a PM entry if and only if measured Availability PM \( \geq \) availabilityObjective.
Table 27 – SLS One-Way Availability Performance Metric Data Type Attributes

10.5.5 Sls1wUnavailableSecondPerformanceMetric
An Unavailable Second (UAS) is defined as a second during Unavailable Time (UAT). MEF 63[5] & MEF64[6]: The SLS MUST define the One-way Unavailable Second Performance Metric Objective as met over T-1 for a PM entry if and only if measured Unavailable Seconds PM <= unavailableSecondObjective.

11 L1 Service Enumerations Definitions

The following section details the set of Enumerations used in support of the MSM Layer 1 Service models.

11.1 ClientProtocol

Enumeration representing Client Protocol of L1 Physical Layer.

Contains Enumeration Literals:
- **ETHERNET:**
  - Representing Ethernet is used as client protocol for UNI.
- **FIBERCHANNEL:**
  - Representing Fiber Channel is used as client protocol for UNI.
- **SDH:**
  - Representing Synchronous Digital Hierarchy (SDH) is used as client protocol for UNI.
- **SONET:**
  - Representing Synchronous Optical Networking (SONET) is used as client protocol for UNI.

11.2 EnabledDisabled

Enumeration used to indicate state as ENABLED OR DISABLED.

Contains Enumeration Literals:
- **ENABLED:**
  - Enumeration representing an ENABLED state.
- **DISABLED:**
  - Enumeration representing a DISABLED state.

11.3 L1VCEndPointExternalInterfaceType

Enumeration used to indicate if the L1VC End Point is either UNI or ENNI.

Contains Enumeration Literals:
- **UNI:**
  - Enumeration representing a UNI.
- **ENNI:**
  - Enumeration representing an ENNI.
11.4 NniProtection

Enumeration representing the protection protocol deployed at ENNI for the ODU container exchanged by the Operator. The enumeration value is either None or One of the rows as specified in G.873.1 Section 8.5, Table 8-1.

Contains Enumeration Literals:
- 1_PLUS_1_UNIDIR_SNC_I:
  - The 1st row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_BIDIR_SNC_I:
  - The 2nd row of the G.873.1 Section 8.5, Table 8-1.
- 1_TO_N_BIDIR_SNC_I:
  - The 3rd row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_UNIDIR_SNC_NE:
  - The 4th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_BIDIR_SNC_NE:
  - The 5th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_UNIDIR_SNC_NS:
  - The 6th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_BIDIR_SNC_NS:
  - The 7th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_UNIDIR_SNC_S:
  - The 8th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_BIDIR_SNC_S:
  - The 9th row of the G.873.1 Section 8.5, Table 8-1.
- 1_TO_N_BIDIR_SNC_S:
  - The 10th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_UNIDIR_CL-SNCG_1:
  - The 11th row of the G.873.1 Section 8.5, Table 8-1.
- 1_PLUS_1_BIDIR_CL-SNCG_1:
  - The 12th row of the G.873.1 Section 8.5, Table 8-1.
- 1_TO_1_BIDIR_CL-SNCG_1:
  - The 13th row of the G.873.1 Section 8.5, Table 8-1.

11.5 TributarySlotRate

Enumeration representing Tributary Slot rate in Gb/s.

Contains Enumeration Literals:
- 1.25:
  - 1.25 Gb/s.
- 2.5:
  - 2.5 Gb/s.

11.6 LineRate

Enumeration representing physical line rate.
Contains Enumeration Literals:

- **OTU1**:
  - Enumeration representing when k=1.
- **OTU2**:
  - Enumeration representing when k=2.
- **OTU2E**:
  - Enumeration representing when k=2e.
- **OTU3**:
  - Enumeration representing when k=3.
- **OTU4**:
  - Enumeration representing when k=4.

### 11.7 L1UniCodingFunction

MEF 63 Coding Function \(<c>\), functionality which encodes bits for transmission and the corresponding decode upon reception.

Contains Enumeration Literals:

- **1000BASE-X**:
  - IEEE Std 802.3: PCS clause 36 coding function
- **10GBASE-W**:
  - IEEE Std 802.3: PCS clause 49 and WIS clause 50 coding function (WAN PHY)
- **10GBASE-R**:
  - IEEE Std 802.3: PCS clause 49 coding function (LAN PHY)
- **40GBASE-R**:
  - IEEE Std 802.3: PCS clause 82 coding function
- **100GBASE-R**:
  - IEEE Std 802.3: PCS clause 82 coding function
- **FC-100**:
  - ANSI INCITS 424-2007[R2012], February 2007: FC-FS-2 clause 5 FC-1 8B/10B coding function (1.0625 Gb/s)
- **FC-200**:
  - ANSI INCITS 424-2007[R2012], February 2007: FC-FS-2 clause 5 FC-1 8B/10B coding function (2.125 Gb/s)
- **FC-400**:
  - ANSI INCITS 424-2007[R2012], February 2007: FC-FS-2 clause 5 FC-1 8B/10B coding function (4.250 Gb/s)
- **FC-800**:
  - ANSI INCITS 424-2007[R2012], February 2007: FC-FS-2 clause 5 FC-1 8B/10B coding function (8.500 Gb/s)
- **FC-1200**:
- **FC-1600**:
  - ANSI INCITS 470-2011, December 2011: FC-FS-3 clause 5 FC-1 64B/66B coding function (14.025 Gb/s)
• FC-3200:
  o ANSI INCITS 488-2016, December 2016: FC-FS-4 clause 5 FC-1 64B/66B
coding function plus 256B/257B transcoding and FEC encoding (28.05 Gb/s)
• STM-1:
  o ITU-T G.707/Y.1322 January 2007: framer, N=1
• STM-4:
  o ITU-T G.707/Y.1322 January 2007: framer, N=4
• STM-16:
• STM-64:
  o ITU-T G.707/Y.1322 January 2007: framer, N=64
• STM-256:
• OC-3:
  o Telcordia GR-253-CORE Issue 5, October 2009: framer, N=3
• OC-12:
  o Telcordia GR-253-CORE Issue 5, October 2009: framer, N=12
• OC-48:
  o Telcordia GR-253-CORE Issue 5, October 2009: framer, N=48
• OC-192:
  o Telcordia GR-253-CORE Issue 5, October 2009: framer, N=192
• OC-768:
  o Telcordia GR-253-CORE Issue 5, October 2009: framer, N=768

11.8 MultiplexingSequences

The value of the Operator Multiplexing Capability List Service Attribute indicates the Operator’s
ability to multiplex a given LO ODUj into a HO ODUk (single-stage), or multiplex a given LO
ODUi into a HO ODUj and into a SHO ODUk (two-stage), or more multiplexing stages.
Enumeration represents the possible multiplexing sequences for a given LO ODU into a HO ODU
using a nomenclature similar to OIF ENNI [8]. Each enumeration value in the subsection
represents the possible multiplexing sequences depending on the selection of lineRate in Section
10.2.1.
11.8.1 HighOrderODU4MultiplexingSequences

Enumeration representing the available multiplexing sequences when Line Rate equals OTU4.

Contains Enumeration Literals:

- **ODU0-ODU1-ODU2-ODU3-ODU4TO64:**
  - Up to 64 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU1-ODU3-ODU4TO64:**
  - Up to 64 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU1-ODU2-ODU4TO80:**
  - Up to 80 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU1-ODU4TO80:**
  - Up to 80 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU2-ODU3-ODU4TO64:**
  - Up to 64 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU2-ODU4TO80:**
  - Up to 80 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU3-ODU4TO64:**
  - Up to 64 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU0-ODU4TO80:**
  - Up to 80 LO ODU0 can be multiplexed in that sequence of HO ODU4.
- **ODU1-ODU2-ODU3-ODU4TO32:**
  - Up to 32 LO ODU1 can be multiplexed in that sequence of HO ODU4.
- **ODU1-ODU2-ODU4TO40:**
  - Up to 40 LO ODU1 can be multiplexed in that sequence of HO ODU4.
- **ODU1-ODU3-ODU4TO32:**
  - Up to 32 LO ODU1 can be multiplexed in that sequence of HO ODU4.
- **ODU1-ODU4TO40:**
  - Up to 40 LO ODU1 can be multiplexed in that sequence of HO ODU4.

- **ODUFLEX-ODU2-ODU3-ODU4TO10G:**
  - LO ODUflex up to 10Gb/s can be multiplexed in this sequence.

- **ODUFLEX-ODU2-ODU4TO10G:**
  - LO ODUflex up to 10Gb/s can be multiplexed in this sequence.

- **ODUFLEX-ODU3-ODU4TO40G:**
  - LO ODUflex up to 40Gb/s can be multiplexed in this sequence.

- **ODUFLEX-ODU4TO100G:**
  - LO ODUflex up to 100Gb/s can be multiplexed in this sequence.

- **ODU2-ODU3-ODU4TO8:**
  - Up to 8 LO ODU2 can be multiplexed in that sequence of HO ODU4.

- **ODU2-ODU4TO10:**
  - Up to 10 LO ODU2 can be multiplexed in that sequence of HO ODU4.

- **ODU2E-ODU3-ODU4TO6:**
  - Up to 6 LO ODU2E can be multiplexed in that sequence of HO ODU4.

- **ODU2E-ODU4TO10:**
  - Up to 10 LO ODU2E can be multiplexed in that sequence of HO ODU4.

- **ODU3-ODU4TO2:**
  - Up to 2 LO ODU3 can be multiplexed in that sequence of HO ODU4.

### 11.8.2 HighOrderODU3MultiplexingSequences

Enumeration representing the available multiplexing sequences when Line Rate equals OTU3.

Contains Enumeration Literals:

- **ODU0-ODU1-ODU2-ODU3TO32:**
  - Up to 32 LO ODU0 can be multiplexed in that sequence of HO ODU3.

- **ODU0-ODU1-ODU3TO32:**
  - Up to 32 LO ODU0 can be multiplexed in that sequence of HO ODU3.

- **ODU0-ODU2-ODU3TO32:**
  - Up to 32 LO ODU0 can be multiplexed in that sequence of HO ODU3.

- **ODU0-ODU3TO32:**
  - Up to 32 LO ODU0 can be multiplexed in that sequence of HO ODU3.

- **ODU1-ODU2-ODU3TO16_1.25TS:**
  - Up to 16 LO ODU1 can be multiplexed in that sequence of HO ODU3 supports 1.25 Gb/s Tributary Slot.

- **ODU1-ODU2-ODU3TO16_2.5TS:**
  - Up to 16 LO ODU1 can be multiplexed in that sequence of HO ODU3 supports 2.5 Gb/s Tributary Slot.

- **ODU1-ODU3TO16_1.25TS:**
  - Up to 16 LO ODU1 can be multiplexed in that sequence of HO ODU3 supports 1.25 Gb/s Tributary Slot.

- **ODU1-ODU3TO16_2.5TS:**
  - Up to 16 LO ODU1 can be multiplexed in that sequence of HO ODU3 supports 2.5 Gb/s Tributary Slot.
• ODUFLEX-ODU2-ODU3TO10G:
  o LO ODUflex up to 10Gb/s can be multiplexed in this sequence.
• ODUFLEX-ODU3TO40G:
  o LO ODUflex up to 40Gb/s can be multiplexed in this sequence.
• ODU2-ODU3TO4_1.25TS:
  o Up to 4 LO ODU2 can be multiplexed in that sequence of HO ODU3 supports 1.25 Gb/s Tributary Slot.
• ODU2-ODU3TO4_2.5TS:
  o Up to 4 LO ODU2 can be multiplexed in that sequence of HO ODU3 supports 2.5 Gb/s Tributary Slot.
• ODU2E-ODU3TO3:
  o Up to 3 LO ODU2E can be multiplexed in that sequence of HO ODU3.

11.8.3 HighOrderODU2And2EMultiplexingSequences
Enumeration representing the available multiplexing sequences when Line Rate equals OTU2 or OTU2E.

Contains Enumeration Literals:
• ODU0-ODU1-ODU2TO8:
  o Up to 8 LO ODU0 can be multiplexed in that sequence of HO ODU2.
• ODU0-ODU2TO8:
  o Up to 8 LO ODU0 can be multiplexed in that sequence of HO ODU2.
• ODU1-ODU2TO4_1.25TS:
  o Up to 4 LO ODU1 can be multiplexed in that sequence of HO ODU2 supports 1.25 Gb/s Tributary Slot.
• ODU1-ODU2TO4_2.5TS:
  o Up to 4 LO ODU1 can be multiplexed in that sequence of HO ODU2 supports 2.5 Gb/s Tributary Slot.
• ODUFLEX-ODU2TO10G:
  o LO ODUflex up to 10Gb/s can be multiplexed in this sequence.

11.8.4 HighOrderODU1MultiplexingSequences
Enumeration representing the available multiplexing sequences when Line Rate equals OTU1.
Contains Enumeration Literals:
• ODU0-ODU1TO2:
  o Up to 2 LO ODU0 can be multiplexed in that sequence of HO ODU1.
11.9 L1UniOpticalInterfaceFunction

MEF 63[5] Optical Interface Function <o>, functionality which converts encoded electrical bits into an optical signal(s) and the corresponding conversion into electrical format upon reception.

Figure 14 – L1 Uni Optical Interface Function Enumerations of Ethernet and Fiber Channel
11.9.1 Eth1000BaseXOpticalInterfaceFunction  
MEF 63[5]: IEEE Std 802.3[1], 1000BASE-X PCS clause 36 coding function  
Contains Enumeration Literals:  
  - SX-PMD:  
    - IEEE Std 802.3: clause 38  
  - LX-PMD:  
    - IEEE Std 802.3: clause 38

Contains Enumeration Literals:
- LR4-PMD:
  - IEEE Std 802.3: clause 87
- ER4-PMD:
  - IEEE Std 802.3: clause 87
- FR-PMD:
  - IEEE Std 802.3: clause 89

11.9.5 Eth100GBaseR OpticalInterfaceFunction
MEF 63[5]: IEEE Std 802.3[1], 100GBASE-R PCS clause 82 coding function

Contains Enumeration Literals:
- LR4-PMD:
  - IEEE Std 802.3: clause 88
- ER4-PMD:
  - IEEE Std 802.3: clause 88

11.9.6 Fc100OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 424-2007[R2012], February 2007: FC-100 FC-FS-2 clause 5 FC-1 8B/10B coding function (1.0625 Gb/s)

Contains Enumeration Literals:
- FC-PI-2-100-SM-LC-L:
  - MEF 63: ANSI INCITS 404-2006, August 2006: FC-PI-2 clause 6.3 FC-0 100-SM-LC-L

11.9.7 Fc200OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 424-2007[R2012], February 2007: FC-200 FC-FS-2 clause 5 FC-1 8B/10B coding function (2.125 Gb/s)

Contains Enumeration Literals:
- FC-PI-2-200-SM-LC-L:
11.9.8 Fc400OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 424-2007[R2012], February 2007: FC-400 FC-FS-2 clause 5 FC-1 8B/10B coding function (4.250 Gb/s)

Contains Enumeration Literals:
- FC-PI-5-400-SM-LC-L:
- FC-PI-5-400-SM-LC-M:

11.9.9 Fc800OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 424-2007[R2012], February 2007: FC-800 FC-FS-2 clause 5 FC-1 8B/10B coding function (8.500 Gb/s)

Contains Enumeration Literals:
- FC-PI-5-800-SM-LC-L:
- FC-PI-5-800-SM-LC-I:

11.9.10 Fc1200OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 364-2003, November 2003: FC-1200 (10.51875 Gb/s) FC-10GFC clause 13 FC-1 coding function (10.51875 Gb/s)

Contains Enumeration Literals:
- FC-10GFC-1200-SM-LL-L:

11.9.11 Fc1600OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 470-2011, December 2011: FC-FS-3 clause 5 FC-1 64B/66B coding function (14.025 Gb/s)

Contains Enumeration Literals:
- FC-PI-5-1600-SM-LC-L:
- FC-PI-5-1600-SM-LZ-I:
11.9.12 Fc3200OpticalInterfaceFunction
MEF 63[5]: ANSI INCITS 488-2016, December 2016: FC-FS-4 clause 5 FC-1 64B/66B coding function plus 256B/257B transcoding and FEC encoding (28.05 Gb/s)

Contains Enumeration Literals:
- FC-PI-6-3200-SM-LC-L:

11.9.13 Stm1OpticalInterfaceFunction
ITU-T G.707/Y.1322, January 2007: framer, N=1

Contains Enumeration Literals:
- I-1:
  - ITU-T G.957, March 2006: I-1
- S-1.1:
  - ITU-T G.957, March 2006: S-1.1

11.10 L1NniOpticalInterfaceFunction

The values of L1 NNI Optical Interface Function are grouped into Classes defined in G.959.1[4]. Within a class there are several possible values for the L1 NNI Optical Interface Function.
11.10.1 Otu1OpticalInterfaceFunction

Enumeration values for l1NniOpticalInterfaceFunction when Line Rate attribute equals to OTU1.

Contains Enumeration Literals:

- **P16S1-1D2**:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P16S1-1D2

- **P32S1-1D2**:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P32S1-1D2

- **P16S1-1D5**:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.655 type Fiber, P16S1-1D5

- **P32S1-1D5**:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.655 type Fiber, P32S1-1D5
- P16L1-1A2:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P16L1-1A2
- P16L1-1A5:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P16L1-1A5
- P1I1-1D1:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P1I1-1D1
- P1S1-1D1:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P1S1-1D1
- P1S1-1D2:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P1S1-1D2
- P1L1-1D1:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P1L1-1D1
- P1L1-1D2:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P1L1-1D2
- 1L1-1D2F:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, 1L1-1D2F
- P1U1-1A2:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, P1U1-1A2
- 1U1-1B2F:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.652 type Fiber, 1U1-1B2F
- P1U1-1A3:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.653 type Fiber, P1U1-1A3
- 1U1-1B3F:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.653 type Fiber, 1U1-1B3F
- P1U1-1A5:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.655 type Fiber, P1U1-1A5
- 1U1-1B5F:
  - G.959.1 July 2018: Optical tributary signal class NRZ 2.5G, ITU-T G.655 type Fiber, 1U1-1B5F
11.10.2 Otu2And2EOpticalInterfaceFunction

Enumeration values for l1NniOpticalInterfaceFunction when Line Rate attribute equals to OTU2 or OTU2E.

Contains Enumeration Literals:

- P41I1-2D1:
  - G.959.1 July 2018: Optical tributary signal class NRZ 10G, ITU-T G.652 type Fiber, P41I1-2D1
- 4I1-2D1F:
  - G.959.1 July 2018: Optical tributary signal class NRZ 10G, ITU-T G.652 type Fiber, 4I1-2D1F
- P16I1-2D2:
  - G.959.1 July 2018: Optical tributary signal class NRZ 10G, ITU-T G.652 type Fiber, P16I1-2D2
- P32I1-2D2:
  - G.959.1 July 2018: Optical tributary signal class NRZ 10G, ITU-T G.652 type Fiber, P32I1-2D2
